Hi Carrie,

We would like your feedback on our plan for the second iteration of the project. We hope to have the notifications up and running for the user to receive the random assessments ~5 times a day, as well as the end of day assessment. We also plan to have time preference editing for the user to be notified and our database created to connect with the application.

Please let us know if this sounds good to you. We plan to have these features two weeks from today on 11/19.

Thanks!

This sounds good! Just one question: What do you mean by 'time preference editing'?

Ah, for time preference editing I meant that we hope to give users the ability to edit their preferred time slot of day to receive push notifications for the random assessments. For instance, if they want to be notified from 11:00 am - 8:00 pm they can select those times.

Hope that makes sense.

Yes, that does. Perfect!

Also, you have created a self-administered assessment, as well? That is the assessment where the participant completes the assessment when they engage in a target behavior, such as smoking a cigarette.

I think we showed you a preview of this in our last brief meeting, but yes we have the self-administered assessment that participants can engage in at any given time by opening the app and selecting the assessment. :)
